

ArcGIS® Integration® for Laserfiche®

Cities Digital's ArcGIS® Integration allows for easy interaction between the ArcGIS® interface and a Laserfiche® repository. The integration allows users to upload documents to Laserfiche® straight from the ArcGIS® interface and view any related documents. The dynamic ArcGIS® map will auto-populate, indicating which features on the map have documents associated with them in Laserfiche®.

Configuration is completed through Laserfiche® Web Settings. Widgets within the ArcGIS® interface can only display Laserfiche® documents by generating a URL through either Web Access® or WebLink®. Features of Cities Digital's ArcGIS® Integration with Laserfiche® include:

- **Files are uploaded and imported into Laserfiche®, automatically applying template data based on widget settings.**
- **Feature layer documents can be stored in a separate database so that the map data loads quickly.**
- **A user can select the feature layers and fields to map to Laserfiche so that they can determine which metadata will be populated on the document.**

ArcGIS® brings together maps, apps, data, and people to make smarter decisions and enables innovation in an organization or community.

ArcGIS® is a practical way to link science with action and is used by governments, industries, NGOs, and Fortune 500 companies around the world. The ArcGIS® Integration can be utilized in numerous ways to improve a firm's planning & analysis, operational awareness, field data collection, asset management, community engagement and much more. These features combined with the advanced document management capabilities of Laserfiche® create a powerful tool that any organization could benefit from.
