

# Digital Signature Kit for Laserfiche®

**Cities Digital's** Digital Signature Kit for Laserfiche® allows users to open any imaged document in Laserfiche® and sign with either an Interlink ePad or Topaz signature pad. One or more signatures may be placed anywhere within a document and sized appropriately. A date/time stamp may also be applied. All signatures are logged in the Audit Trail® and a second signed version is automatically linked to the original unsigned version. Optionally, the application may be configured to overwrite the unsigned document.

Digital Signature Kit includes the following features for instant document approval:

- Integration opens by clicking the toolbar button within Laserfiche® while a document is selected.
- Is compatible with Interlink ePad or Topaz digital signature pads.
- Allows for placing one or more signatures in any location within a document.
- Signed documents can overwrite the original document, or be created as separate version saved in the same location as the original.
- Laserfiche Audit Trail® is used to track the history of the digital signatures.

- Updates template data upon completion of signature. Saves a profile and signature template setup for frequently signed document types.
- Includes date/time stamps.
- Automatically links unsigned document versions to the newly signed version.

By applying a digital signature, documents are processed faster. Licensing is workstation based. Contact [sales@citiesdigital.com](mailto:sales@citiesdigital.com) or call 855-714-2800x2 for more information about Cities Digital's Digital Signature Kit integration for Laserfiche®.
