

# MAGNIVault

## The Safe Way to Share Documents with Clients!

MagniVault from Cities Digital is a private document sharing website.

### What is MagniVault?

MagniVault is a private document sharing site that allows users to share contracts, invoices and other confidential material from Laserfiche with clients privately. Whether uploaded documents need to be reviewed and signed, or just available for clients to view as needed, MagniVault securely improves accessibility to sensitive material.

**MagniVault** is efficient.

### How does MagniVault work?

With MagniVault, users are able to efficiently share customer invoices with hundreds of clients, or share important contracts with just one. Clients will have private access to their documents, with all files in a read-only format allowing the organization to stay in control of uploaded content.

**MagniVault** improves client relationships.

### How is MagniVault different?

MagniVault comes fully integrated with Laserfiche. Files are uploaded to MagniVault when a defined “tag” is applied to a document in Laserfiche - the document then securely and instantly transmits to MagniVault servers. Administrators and clients are able to exchange comments about uploaded content and administrators also have the ability to display custom data in the client dashboard. In addition, users may modify MagniVault’s appearance for a personalized look and feel.

**MagniVault** is unlike anything else out there today.

### What does MagniVault cost?

A customized MagniVault experience begins at \$300/mo. Contact us today at 855.714.2800 or sales@citiesdigital.com, and we’ll customize a MagniVault package that’s just right for you.
